In sent copies, the To in the main header should be From. To is available in the box underneath it.

If a hyperlink is included in the message the style for it should also be in the downloadable PNG.

Both updates have been implemented and verified:

1. Sent Copies Header: `From:` in Header, `To:` in Box Below

- **Main Header Bar**:
  - For sent copies in both the **Inbox** and **Archive** views, the header now displays: `From: <Sender Name> (<domain>)` (e.g., `From: Jason (novy.addr.bar)`).
  - The destination is no longer placed in the main header.
- **Recipients Box Underneath**:
  - The metadata bar directly beneath the header (`message-recipients-bar`) displays the full recipient destination list:
    `To: <destination website(s)>`

---

2. Hyperlink Styles in Downloadable PNG

In `downloadMessageAsPng()`, the canvas rendering engine now parses the DOM body tokens to distinguish between plain text and `<a>` hyperlink elements:

- **Hyperlink Elements**: Rendered with **bold weight**, vibrant hot-letter orange color (`#ff5c26`), and a crisp **underline**.
- **Standard Body Text**: Rendered with standard weight and amber color (`#ffb347`) without underline.
- The downloaded PNG now visually reflects hyperlinks exactly as they appear in the live web UI.
