Add an option to archive all messages.

An option to **Archive All Messages** has been added to the application.

Key Additions

1. **Inbox Header & Footer Actions (`index.php`, `index.php`)**:
    - Added a `[ 📦 Archive All Messages ]` button with a confirmation dialog to the Inbox header panel right alongside `[ ✓ Mark All Read ]`.
    - Added a matching action bar at the bottom of the inbox list when multiple messages are displayed, allowing all messages to be archived without scrolling back to the top.
2. **Backend Archiving & Restoration (`db.php`, `index.php`)**:
    - Implemented `archive_all_messages_for_domain($pdo, $domain)` in `db.php` to move all inbox messages for the client into `message_archives` and `message_deletions` in a single operation without duplicating message bodies in the shared database.
    - Implemented the `archive_all_messages` POST action handler in `index.php` with confirmation feedback reporting how many messages were moved.
    - Added symmetrical `unarchive_all_messages_for_domain()` and an `[ 📥 Move All Back to Inbox ]` action in the Archive tab (`tab=archive`) header to restore an entire archive list at once.
3. **Documentation & Synchronization**:
    - Updated and synchronized documentation across `README.md`, `/addr.bar/tricurse/contact/`, `/addr.bar/addressbar.net/contact/`, and `/var/www/html/contact/`.
