Change the option to delete messages into Archive Message. Archiving a message moves it to a separate list. Lists can be accessed by month and year.

The option to delete messages has been replaced with **Archive Message**, which moves messages out of the active Inbox and into a dedicated Archive list filterable and accessible by month and year:

Key Enhancements

1. **"Archive Message" Replaces Deletion**:
    - Replaced all `[ ▫ Delete ]` options on received, sent-copy, and delayed messages in `index.php` with `[ 📦 Archive Message ]`.
    - Confirmation dialog prompts: `"Archive message? It will be moved to your archive list."`
    - Messages are never permanently destroyed; archiving records the action in `message_archives` (and legacy deletion requests are safely routed to archive).
2. **Dedicated Separate Archive List (`tab=archive`)**:
    - Added a new 📦 **Archive** tab in the desktop navigation of `index.php` showing the total number of archived messages.
    - Archiving immediately removes the message from the active Inbox (`get_inbox_messages_for_domain()` filters out archived messages) and moves it to the separate archive list.
    - Each archived card displays full message details, the original received timestamp, the archive timestamp badge, reply option, and an `[ 📥 Move Back to Inbox ]` option.
3. **Access Lists by Month and Year**:
    - Implemented `get_archive_periods_for_domain()` and `get_archived_messages_for_domain()` in `db.php` to automatically group archived messages by month and year.
    - The Archive view provides:
        - **Month & Year Selectors**: Choose any month (January – December) and year to view that period's archived messages.
        - **Quick-Access Period Buttons**: Direct links for each available period showing message counts (e.g., `[ 📅 November 2026 (1) ]`, `[ 📅 October 2026 (1) ]`, `[ 📅 December 2025 (1) ]`).
        - **All Archive Lists**: Quick toggle to view the full archive timeline across all periods.

4. **Schema & Shared Database Integration**:
    - Added `message_archives` table to `schema.sql` and `db.php` with automatic self-healing and migration of legacy deletion records.
    - Integrated `message_archives` into `merge_databases.php`.

Verification & Synchronization

- Unit tests verified archiving, inbox exclusion, month/year grouping, list retrieval by specific month/year, and inbox restoration.
- Synchronized all files across `/addr.bar/tricurse/contact/`, `/addr.bar/addressbar.net/contact/`, and `/var/www/html/contact/`.
- Committed changes to git repositories in `/addr.bar/tricurse/contact` and `/addr.bar`.
