Remove Unread, Sent Copy, and Server Group letter from the printout.

The badges **Unread**, **Sent Copy**, and **Server Group letter** have been removed from all printouts.

Summary of Changes

1. **Filtered from PNG Printouts**:
    - In both `downloadMessageAsPng` and `exportArchivePageAsPng`, badges matching `● UNREAD`, `📤 SENT COPY` / `📤 Sent Copy`, and `👥 Server Group Letter` are explicitly filtered out before rendering onto the canvas.
    - Clean badges (such as archive page stamps or delivery status badges) are preserved without the transient state badges.
2. **Filtered from Browser Print / PDF**:
    - In the `@media print` print stylesheet, all status badge elements are suppressed with `display: none !important;`.
    - The dedicated `printSingleMessage` PDF layout excludes these status tags, producing a clean formal letter document.
3. **Synchronized Across Locations**:
    - tricurse/contact/index.php
    - addressbar.net/contact/index.php
    - `/var/www/html/contact/index.php`
    - Validated (`php -l` and `node -c`) and committed to git on `main`.
