The full subject should be in the top box of the first page.

The top box (Box 1) on the first page of printable PNGs has been updated to display the **full subject** without ellipsis truncation:

Changes Implemented

1. **Full Subject Wrapping (`wrapSubjectLines`)**:
   - Replaced static truncation (`subject.substring(0, 31) + "..."`) in both downloadMessageAsPng and exportArchivePageAsPng.
   - Added wrapSubjectLines to wrap the subject across multiple lines using the `bold 26px` title font.
   - Line 1 accounts for any right-aligned date and badges, leaving lines 2+ to utilize the full inner width (888 px).
2. **Dynamic Top Box Scaling**:
   - Box 1 dynamically computes its height (`box1Height = Math.max(50, 50 + (subjectLines.length - 1) * 32)`), maintaining consistent 25 px vertical padding and 32 px line spacing.
   - Box 2 (`To:` on the left, `From:` on the far right) automatically positions directly below Box 1 at `curY += box1Height`.
3. **Paging Integration**:
   - First-page body line pagination dynamically computes `p1_headerHeight = box1Height + 44 + (sharedBanner ? 38 : 0);` so any multi-line subject cleanly adjusts the available lines on Page 1 while pushing remaining body text onto continuation pages.
4. **Mirror Synchronization & Verification**:
   - Synchronized to addressbar.net/contact/index.php and html/contact/index.php.
   - Validated PHP syntax (`php -l`) and JavaScript script execution (`node -c`) clean across all files.

The badges were removed from the printout. Line one no longer needs to take into account the right-aligned badges.

The badges have been removed from the printable PNG exports:

1. **Badge Removal**:
    - Removed badge querying and rendering from Box 1 in both `downloadMessageAsPng` and `exportArchivePageAsPng`.
    - Only the date (if present) is rendered on the right side of Box 1.
2. **Line 1 Width Calculation**:
    - `metaRightW` now only measures the right-aligned date text (`ctx.measureText(dateStr).width + 12`).
    - Line 1 has the full remaining width without factoring in badges; if no date is present, Line 1 receives the entire 888 px width.
3. **Synchronized & Verified**:
    - Changes committed to git (`131739d`) and synced across addressbar.net/contact/index.php and html/contact/index.php.
    - Validated clean PHP and JavaScript syntax.
