Use a new theme. I'm including a PDF with the colors. I also want to change the way the site is designed. Hide all of the technical information like IP addresses. Use a single font size—12pt. Optimize it for mobile so the text is sized well on devices that auto-resize the page.

The theme and design updates have been implemented across the contact suite:

1. New Theme: The Thermionic Foundry & Broadcast Band

Implemented the color palette and aesthetics from the specification:

- `--furnace-core` (`#0d0b0a`): Deep obsidian foundry background with subtle grid texture.
- `--chassis-iron` (`#1a1614`): Heavy radio console chassis and panel casings.
- `--crucible-charcoal` (`#28201b`): Inner message cards, form sections, and data rows.
- `--brass-stamped` (`#543d2b`): Stamped-brass borders, dividers, and mechanical bevels.
- `--filament-amber` (`#ffb347`): Vacuum-tube dial glow for primary typography and labels.
- `--hot-letter-orange` (`#ff5c26`): Active incandescent highlights, unread badges, and interactive controls.
- `--on-air-crimson` (`#9c2415`): Studio backlit header banners and lockout indicators.
- `--incandescent-white` (`#fff4e6`): White-hot molten accents and status indicators.

2. Redesigned Layout & Mobile Optimization

- **Single Font Size (12pt)**: Applied a uniform `12pt !important` font size across all headings, body text, buttons, form inputs, labels, and table cells.
- **Mobile Text Scaling & Auto-Resize Fixes**: Added `-webkit-text-size-adjust: 100%`, `-moz-text-size-adjust: 100%`, and `text-size-adjust: 100%` along with `viewport-fit=cover` and `.table-responsive` overflow wrappers so mobile browsers will not auto-shrink or disproportionately resize text.
- **Touch-Friendly Controls**: Form buttons and inputs have minimum touch targets of 44px with clear tap states.

3. Removed Technical Information & IP Addresses

- Removed IP address displays from login lock banners, notice alerts, and authentication responses.
- Removed delivery plumbing metadata (`Client IP`, `stream_context_create`, Reverse DNS PTR notes) from incoming message cards; message verification now displays cleanly as ✓ `RECEIVED`.

- Session lockout management tables now display masked session references (`Session #...`) instead of exposing raw client IP addresses.
- Simplified federation descriptions to focus on peer website correspondence rather than internal socket/stream mechanics.

Synchronized Files

- `index.php`
- `signup.html`
- `auth.php`
- Synchronized to deployment locations in `/addr.bar/addressbar.net/contact/` and `/var/www/html/contact/`.
