Remove the "Please fill out this field" from the message body.

The native browser tooltip `"Please fill out this field"` has been removed from the Message Body field.

Summary of Changes

1. **Removed HTML5 `required` Attribute**
    - In index.php, removed `required` from `<textarea id='messageInput'>`, eliminating the browser's validation bubble/tooltip popup on submit.
    - Updated the field label to `Message Body (optional, max 15,000 chars):` matching the optional Subject field.
2. **Relaxed Backend Validation**
    - In index.php, updated the outbound `send_mail` action so that only at least one **To** destination is required, allowing letters with empty/blank bodies (such as subject-only notifications).
    - In index.php, updated the inbound `inter_site_mail` federated receiver endpoint to accept messages without requiring non-empty bodies.
3. **Synchronized Across Locations**
    - Changes applied and validated across tricurse/contact/index.php, addressbar.net/contact/index.php, and `/var/www/html/contact/index.php`.
    - Syntax verified (`php -l` and `node -c`) and committed to git.
